

ASSESSMENT BRIEF 3 Final SRS Report

COURSE: Bachelor of Information Technology/Bachelor of Information Technology with a Specialisation in Cyber Security	
Unit:	Capstone Project
Unit Code:	CPRO306
Type of Assessment:	Formative Assessment
Length/Duration:	2500 words
Unit Learning Outcomes addressed:	1. Critically analyse methods and techniques for applying IT at the corporate level. 2. Identify and present requirements for an information system to solve a business problem in a large, complex organisation. 3. Design, develop, test & evaluate an appropriate systems solution, incorporating ethical requirements and acceptance criteria. 4. Identify and resolve critical technical issues with minimal supervision. 5. Critically reflect on approaches and team performance in delivering an applied project. 6. Evaluate project process and outcomes—including team management—against the project proposal.
Submission Date:	Week 5
Assessment Task:	SRS Report
Total Mark:	100
Weighting:	35%

Students are advised that **submission of an Assessment Task past the due date without a formally signed approved Assignment Extension Form** (Kent Website [MyKent Student Link](#)> *FORM – Assignment Extension Application Form – Student Login Required*) **or previously approved application for other extenuating circumstances impacting course of study, incurs a 5% penalty per calendar day,**

calculated by deduction from the total mark.

For example. An Assessment Task marked out of 40 will incur a 2 mark penalty for each calendar day.

More information, please refer to (Kent Website [MyKent Student Link](#)> *POLICY – Assessment Policy & Procedures – Student Login Required*)

ASSESSMENT DESCRIPTION:

In this part of the assessment task the student needs to identify Systems requirements, business requirements and the user requirements of the system they have proposed. The report will be named as “software requirement specification” for your proposed project. The report needs to be prepared professionally and presentable to the clients they are working with. The report also will include the hardware and software requirements, detailed user requirements using a use case diagram and from that then the report needs to identify and record functional and non-functional requirements, work breakdown structure, GANTT Chart, user interface etc. You also need to include technical details of the system which will be carried on development of the project based on the project you have chosen and to comply with the functional and non-functional requirements. The report should include your software development environment, files and folder structure, data flow diagram, data dictionary, entity relationship diagram, user interface storyboard etc. The report also needs the test plan and the implementation plan which will be used later for testing and implementing the system. The report will have the following criteria and a sample of software requirement specification is available in the student resources folder as a guide for you to follow:

- An updated scope statement, including more detailed descriptions of key deliverables
- A system architecture will provide the required functionality and meet its non-functional objectives.
- Show that the proposed user interface design will achieve its objectives.
- Suggested changes and improvements are reasonable and useful.
- A summary/sample of completed deliverables under IS requirements and design.
- The system development has been planned and managed.
- Teamwork has been managed.
- The business requirements have been elicited and understood.
- Use case diagram, Data flow diagram
- A database design will provide the necessary data management.
- Provide evidence that you have implemented the data encryption and anonymization of data
- Perform ‘Data Protection Impact Assessment’ to help ensure compliance, facilitate a privacy-by-design approach and identify better practice.
- A user interface design will help and facilitate users to perform their tasks.
- Your responses on the feedback from your Lecturer.

Based on the organization that you and your team has chosen; you have to design the Information System project and prepare the software requirement specification report.

MARKING GUIDE (RUBRIC):

Marking Criteria	Fail (0-49% of the criterion mark)	Pass (50-64% of the criterion mark)	Credit (65-74% of the criterion mark)	Distinction (75-84% of the criterion mark)	High Distinction (85-100% of the criterion mark)
Criterion -1 (20 mark) Project Description	No attempt done for Business description, Project description & problems scenario, Project objectives, purpose describe in detail. Detailed scope definition, New & proposed system design specifications stated, Methodologies chosen for the project	Little attempt of Business description, Project description & problems scenario, Project objectives, purpose describe in detail. Detailed scope definition, New & proposed system design specifications stated, Methodologies chosen for the project	General description of Business description, Project description & problems scenario, Project objectives, purpose describe in detail. Detailed scope definition, New & proposed system design specifications stated, Methodologies chosen for the project	Specifically stated Business description, Project description & problems scenario, Project objectives, purpose describe in detail. Detailed scope definition, New & proposed system design specifications stated, Methodologies chosen for project	Specifically, and comprehensively stated Business description, Project description & problems scenario, Project objectives, purpose describe in detail. Detailed scope definition, New & proposed system design specifications stated, Methodologies chosen for the project
Criterion-2 (5 mark) Group cohesiveness	No Team formed or team works has been distributed and the team members are not aware of their tasks and participation	Team formed, less distribution of team works, and the team members are aware few of their tasks and participation	Team formed, some team works has been distributed and the team members are aware of some of their tasks and participation	Team formed almost all team works has been distributed and the team members are aware of all their tasks and participation	Team formed, all team works has been distributed and the team members are aware of all their tasks and participation
Criterion-3 (20 marks) Clearly analysed the system	No attempt done for Business requirement, System requirement and System configuration	Has attempted small bits of Business requirement, System requirement, System configuration such as Hardware Configuration, Software Configuration. Little bit of User requirement analysis is done using few use case diagram, use case definition & based on use case definition. Few Functional and Non-functional requirement analysed	Generally analysed the Business requirement, System requirement, System configuration such as Hardware Configuration, Software Configuration, User requirement analysis using use case diagram, use case definition & based on use case definition. Both the Functional and Non-functional requirement analysed	Clearly analysed the Business requirement, System requirement, System configuration such as Hardware Configuration, Software Configuration, User requirement analysis using use case diagram, use case definition & based on use case definition. Both the Functional and Non-functional requirement analysed	Clearly and professionally analysed the Business requirement, System requirement, System configuration such as Hardware Configuration, Software Configuration, User requirement analysis using use case diagram, use case definition & based on use case definition. Both the Functional and Non-functional requirement analysed

Criterion-4 (20 marks) Database design completed and cited	Not designed any of the Database requirement, Entity Relationship Diagram (ERD) & Class Diagram, Tables, Data Flow Diagrams (DFD) No evidence that you have implemented the data encryption and anonymization of data No attempt in identifying and mitigating ethical risks in database design.	Has attempted few Database requirement, Entity Relationship Diagram (ERD) & Class Diagram, Tables, Data Flow Diagrams (DFD) Little evidence that you have implemented the data encryption and anonymization of data. Minor attempt in identifying and mitigating ethical risks in database design.	Has attempted some of the Database requirement, Entity Relationship Diagram (ERD) & Class Diagram, Tables, Data Flow Diagrams (DFD) Some evidence that you have implemented the data encryption and anonymization of data. Some attempt in identifying and mitigating ethical risks in database design	Clearly and professionally designed almost all the Database requirement, Entity Relationship Diagram (ERD) & Class Diagram, Tables, Data Flow Diagrams (DFD) Most evidence that you have implemented the data encryption and anonymization of data. Most evidence provided in identifying and mitigating ethical risks in database design.	Clearly and professionally designed all the Database requirement, Entity Relationship Diagram (ERD) & Class Diagram, Tables, Data Flow Diagrams (DFD) Adequate and clear evidence that you have implemented the data encryption and anonymization of data. Adequate and clear evidence provided in identifying and mitigating ethical risks in database design
Criterion-5 (20 marks) User interface design planned	(No attempt) Did not mentioned the User interface design methods, did not created any of the User Interface story board, input data forms, Output report forms, and Web site design concepts and layouts	Mentioned few User interface design methods, created few User Interface story board, input data forms, Output report forms, mentioned few Web site design concepts and layouts	Mentioned some User interface design methods, created some User Interface story board, input data form Output report forms, mentioned some Web site design concepts and layouts	Clearly mentioned almost all the User interface design methods, created almost all User Interface story boards, input data forms, Output report forms, clearly mentioned almost all Web site design concepts and layouts	Clearly mentioned all the User interface design methods, created all User Interface story board, input data forms, Output report forms, clear mentioned all Web site design concepts and layouts
Criterion-6 (5 marks) Test plan and system implementation planned	Did not created a test plan and a system implementation plan Did not Perform 'Data Protection Impact Assessment'	Created a vague test plan and a vague system implementation plan Little evidence of performing 'Data Protection Impact Assessment'	Created a basic test plan and a basic system implementation plan Some evidence of performing 'Data Protection Impact Assessment'	Created almost complete test plan and a system implementation plan covering almost all the scenario Most information provided regarding performing 'Data Protection Impact Assessment'	Created a complete test plan and a system implementation plan covering all scenarios Adequate and clear information provided regarding performing 'Data Protection Impact Assessment'
Criterion-7 (5 marks) Referencing	One or no academic resources be cited for the investigation that should be placed for a particular project	Two academic resources be cited for the investigation that should be placed for a particular project	Three academic resources be cited for the investigation that should be placed for a particular project	Four academic resources be cited for the investigation that should be placed for a particular project	Five academic resources be cited for the investigation that should be placed for a particular project
Criterion-8 (5 marks) Individual Contribution (evaluated individually via the allocated tasks completed)	Work is incomplete , inaccurate, or does not meet basic assessment task requirements. Failing to achieve these 5 marks will result in an overall assessment failure.	Produces work that meets minimum requirements with frequent errors or gaps in quality.	Completes work to a satisfactory standard with occasional minor errors; meets assessment requirements.	Consistently delivers high-quality work with attention to detail, exceeding assessment requirements.	Produces outstanding, meticulous work that surpasses project expectations and contributes to project excellence.
*Workload Distribution (no marks assigned, only weight indicated)	If a student's contribution is below 20%, they will receive an F for this assessment task. The final mark awarded will be either the actual group assignment mark or 49, whichever is lower.	If a student's contribution is between 20%-25%, they will receive an P or lower for this task. The final mark awarded will be either the actual group assignment mark or 64, whichever is lower.	For contributions of 25% or higher, the group assignment mark will be awarded as is.		

ASSESSMENT SUBMISSION

A written assignment undertaken in groups of three or four students in the form of a report addressing a selected topic related to abovementioned project. This assessment is a group project/activity and students are required to work with their respective groups. No individual submission will be accepted. You will not receive any marks for this assignment if your group members collectively report against you for non-participation or non-cooperation. You have to nominate someone as your group leader to coordinate the assignment submission. Only one submission is accepted for each group.

The assignment must be submitted online in Moodle. All materials **MUST** be submitted electronically in Microsoft Word format. Other formats (e.g., pdf or MAC file) may not be readable by markers. Please be aware that any assessments submitted in other formats will be considered LATE and will lose marks until it is presented in MS Word. No paper based or hardcopy submission will be accepted.

Our Academic Learning Support (ALS) team would be happy to help you with understanding the task and all other assessment-related matters. For assistance and to book one-on-one meeting please email one of our ALS coordinators (Sydney ALS_SYD@kent.edu.au; Melbourne ALS_MELB@kent.edu.au). For online help and support please click the following link and navigate Academic Learning Support in Moodle.

<http://moodle.kent.edu.au/kentmoodle/course/view.php?id=5>

GENERAL NOTES FOR ASSESSMENT TASKS

Content for Assessment Task papers should incorporate a formal introduction, main points and conclusion.

Appropriate academic writing and referencing are inevitable academic skills that you must develop and demonstrate in work being presented for assessment. The content of high quality work presented by a student must be fully referenced within-text citations and a Reference List at the end. Kent strongly recommends you refer to the Academic Learning Support Workshop materials available on the Kent Learning Management System (Moodle). For details please click the link <http://moodle.kent.edu.au/kentmoodle/mod/folder/view.php?id=3606> and download the file titled "Harvard Referencing Workbook". This Moodle Site is the location for Workbooks and information that are presented to Kent Students in the ALS Workshops conducted at the beginning of each Trimester.

Kent recommends a minimum of **FIVE (5)** references in work being presented for assessment. Unless otherwise specifically instructed by your Lecturer or as detailed in the Unit Outline for the specific Assessment Task, any paper with less than five (5) references may be deemed not meeting a satisfactory standard and possibly be failed.

Content in Assessment tasks that includes sources that are not properly referenced according to the "*Harvard Referencing Workbook*" will be penalised.

Marks will be deducted for failure to adhere to the word count if this is specifically stated for the Assessment Task in the Unit Outline. As a general rule there is an allowable discretionary variance to the word count in that it is generally accepted that a student may go over or under by 10% than the stated length. Students are not allowed to use AI tools for the preparation of their submissions.

Use of generative artificial intelligence tools are not permitted to be used for this assessment. Please respect this and be aware that where unauthorized use is detected, it will be considered as academic misconduct and penalties will apply.

GENERAL NOTES FOR REFERENCING

References are assessed for their quality. Students should draw on quality academic sources, such as books, chapters from edited books, journals etc. The textbook for the Unit of study can be used as a reference, but not the Lecturer Notes. The Assessor will want to see evidence that a student is capable of conducting their own research. Also, in order to help Assessors determine a student's understanding of the work they cite, all in-text references (not just direct quotes) must include the specific page number(s) if shown in the original. Before

preparing your Assessment Task or own contribution, please review this 'YouTube' video (Avoiding Plagiarism through Referencing) by clicking on the following link: link:

<http://moodle.kent.edu.au/kentmoodle/mod/folder/view.php?id=3606>

A search for peer-reviewed journal articles may also assist students. These type of journal articles can be located in the online journal databases and can be accessed from the Kent Library homepage. Wikipedia, online dictionaries and online encyclopaedias are acceptable as a starting point to gain knowledge about a topic, but should not be over-used – these should constitute no more than 10% of your total list of references/sources. Additional information and literature can be used where these are produced by legitimate sources, such as government departments, research institutes such as the National Health and Medical Research Council (NHMRC), or international organisations such as the World Health Organisation (WHO). Legitimate organisations and government departments produce peer reviewed reports and articles and are therefore very useful and mostly very current. The content of the following link explains why it is not acceptable to use non-peer reviewed websites (Why can't I just Google?): <https://www.youtube.com/watch?v=N39mnu1Pkgw>
_ (thank you to La Trobe University for access to this video).

Student guide to using generative AI

Generative AI tools cannot be used for any assessments in this unit. In this unit, you must not use generative artificial intelligence (AI) to generate any materials or content in relation to your assessment. If you use AI to write your assessment: the value of the assessment would be diminished; you may not develop the required skills for your future studies or career; and you would be breaching academic integrity which may constitute academic misconduct.
